

Software engineer

Job title: **Software engineer**
Company: **Axian Consulting Ltd.**
Location: **Home-based/Cambridge Area**
Last updated: **January 2021**

Opportunity

Axian is a new company established as a spinout from a large management consulting group. The Axian team has a long track record of working with global pharmaceutical, biotech, and medtech companies on patient safety. The experienced leadership team is now looking to grow the company further, building on existing expertise and investment in a cloud-based digital platform. Our team is passionate about delivering innovative digital solutions to clients which make a difference to patients and clinicians. As a company we focus on designing and deploying digital engagement tools for clinical practice and clinical trials, which not only assure safe use but ultimately help improve health outcomes.

You will be joining a technically strong team that works hard but also has a lot of fun. We are supportive of each other and committed to balancing purpose and profit. The ethos of the company ensures that we consider the impact of decisions on our team, clients, suppliers, community, and the environment.

Position summary

We are hiring a Software Engineer with previous commercial software development experience to join our team. Initially working from home but ultimately with the option to work out of a Cambridge-based office.

To apply, email mcassidy@axian.consulting stating the position title and enclosing your CV.

Qualifications

We are seeking an individual with 1-2 years of software development experience to join our team. Preferred experience includes:

- Commercial software development experience
- Experience of working with varied and potentially distributed teams, including with Graphic Designers, Software Engineers, Project Managers, Subject Matter Experts and Business Analysts.
- Experience in the use of the following technologies:
 - HTML5 / CSS3 / JavaScript
 - Frameworks and libraries such as jQuery and Bootstrap
 - Good understanding of common web concepts and data formats, such as HTTP, REST, APIs, XML and JSON
 - Server side technologies such as C# (.netCore MVC Architecture would be beneficial)
 - Database technologies such as MySQL
 - Experience across the full stack is desirable
- Some experience of using git and an understanding of its version control
- Experience of developing web-based solutions across multiple devices, including mobile
- Ability to work in an Agile methodology and happy to move from project to project to meet client demands
- Strong communication skills
- Any experience with or desire to get involved with hybrid mobile App development (Android/iOS) would be beneficial but not essential
- Experience of working with Amazon Web Services (AWS) would be beneficial but not essential

Requirements

- Bachelor's degree in Computer Science/Computer Information Systems or equivalent experience
- UK work authorisation is required.
