

# Senior software engineer

Job title: **Senior software engineer**  
Company: **Axian Consulting Ltd.**  
Location: **Home-based/Cambridge Area**  
Last updated: **August 2021**

## Opportunity

Axian is a newly formed company (spin-out), working with Pharmaceutical, Biotech and Medtech companies globally.

Our team members are passionate about delivering innovative digital solutions to clients and as a company we embrace the challenge of bringing digital engagement tools to clinical practice and trials, this not only give clients valuable insights, but assure safe use and improve health outcomes.

Joining us will mean joining a technically strong team that work hard but also have a lot of fun. We are supportive of each other and committed to balancing purpose and profit. The ethos of the company mean that we consider the impact of decisions on our team members, clients, suppliers, community, and the environment.

## Position summary

We are hiring a Senior Software Engineer with previous commercial software development experience to join our team.

## Qualifications

We are seeking an individual with 3-5 years of software development experience to join our team. Preferred experience includes:

- Commercial software development experience
- Ability to handle the software development cycle end to end and mentor other junior members of the team
- Ability to self-manage their own workload and projects based on the company needs

- Successful experience working with varied and potentially distributed teams, including with Graphic Designers, Software Engineers, Project Managers, Subject Matter Experts and Business Analysts.
- Comfortable engaging directly with both technical and non-technical clients.
- Proficient in the use of front-end technologies such as HTML5 / CSS3 / JavaScript
- Strong Experience of application frameworks and libraries such as jQuery and Bootstrap
- Strong understanding of common web concepts and data formats, such as HTTP, REST, APIs, XML and JSON
- Strong C# experience using .netCore MVC Architecture
- Strong experience of one or more database technologies such as MySQL
- Strong experience of using and an understanding of version control using git
- Experience of developing web-based solutions across multiple devices, including mobile
- Ability to work in a fast paced, high-pressure, and developing team environment
- Strong communication skills within the team and with clients
- Any experience with mobile App development (Android/iOS – hybrid or native) would be advantageous
- Experience of working with Jira to manage agile projects would be advantageous
- Experience of working with Amazon Web Services (AWS) would be advantageous

## Requirements

- Bachelor's degree in Computer Science/Computer Information Systems or equivalent experience
- UK work authorisation is required.
